Hygieia Launches a New User Friendly Vaccine for Controlling AE and Fowl Pox

Hygieia Biological Laboratories, Woodland, CA (www.hygieialabs.com) has recently received USDA license for a unique freeze-dried live virus vaccine that contains Avian Encephalomyelitis, Fowl Pox and Pigeon Pox viruses in a single preparation. The vaccine is available in boxes of ten 1000 dose vials, and is supplied with sterile diluent and double needle applicators for wing web administration.

According to Hygieia’s President, Mr. Jim Wallis, the main advantage of this product is that it will eliminate the time consuming practice of field mixing separate pigeon pox and fowl pox vaccines thus providing a user friendly product for the poultry industry.

Scientists at Hygieia Biological Laboratories conducted extensive studies on this product to evaluate its safety and efficacy under laboratory and field conditions following USDA approved protocols and guidelines. They demonstrated the vaccine to be safe and efficacious for use in chickens aged 8 weeks or older. The vaccine produced easily palpable pox “takes” in vaccinated chickens and induced excellent protective immunity against virulent strains of fowl pox and avian encephalomyelitis viruses. The company has filed for a US patent on this product.

Other live virus vaccines currently available from Hygieia Biological Laboratories include Avian Encephalomyelitis + Fowl Pox vaccine, Fowl Pox vaccine, Pigeon Pox vaccine and Avian Encephalomyelitis vaccine.

For product information and ordering vaccine, contact Hygieia’s National Sales Manager, Mr. Gary Spina at 209-605-3662 (gaspina@aol.com). For technical questions contact Dr. Girish Sarma at 530-668-1841 (gsarmax@aol.com).
